

DIAMOND GRADE: prismatic reflective sheeting that delivers optimal performance at all sight distances. Its optical elements return almost 60 percent of available light to drivers.

High Intensity Grade Prismatic: prismatic sheeting reflective sheeting with a unique construction providing high levels of retroreflectivity for multiple traffic situations. Clearly visible at viewing angles of 30 degrees or more, so even misaligned signs or signs placed at an angle to approaching drivers can be seen.

Engineer Grade: is a reflective material used in the production of retroreflective work zone signs and devices. Sheeting is intended to have a similar appearance when viewed in daylight or by retroreflected light at night.
